

The **Wilshire 5000 Total Market IndexSM** (Wilshire 5000SM) measures the performance of all U.S. equity securities with readily available price data. Approximately 5,000 capitalization-weighted security returns are used to adjust the index. The Wilshire 5000 base is its December 31, 1980 capitalization of \$1,404.596 billion. Therefore, the index is an excellent approximation of dollar changes in the U.S. equity market. For instance, values of 2157.146 on December 30, 1985 and 2164.690 on December 31, 1985 represent an approximate increase of \$7.5 billion. Created in 1974, with a time series of data beginning on December 31, 1970, the Wilshire 5000 is the most pure and complete measure of the entire U.S. stock market.

Three versions of the index are maintained: one weighted by full market capitalization, one weighted by float-adjusted market capitalization, and one for which all securities are weighted equally.

The Wilshire IndexesSM are calculated and distributed by Wilshire Associates Incorporated ("Wilshire"). It is not possible to invest directly in an index. Exposure to an asset class represented by an index may be available through investable instruments derived from that index. Wilshire makes no representations regarding the advisability of investing in investment products based on the Wilshire Indexes not sponsored, endorsed, sold or promoted by Wilshire. Index returns do not reflect payment of certain sales charges or fees an investor may pay to purchase the securities underlying the Index or investment vehicles intended to track the performance of the Index. The imposition of these fees and charges would cause actual performance of the securities/vehicles to be lower than the Index performance shown. Inclusion of a company in the Wilshire Indexes does not in any way reflect an opinion of Wilshire on the investment merits of the company.
